

DROP INDEX index;

Find the Solution for the following:

1. Create a sequence to be used with the primary key column of the DEPT table. The sequence should start at 200 and have a maximum value of 1000. Have your sequence increment by ten numbers. Name the sequence DEPT_ID_SEQ.
2. Write a query in a script to display the following information about your sequences: sequence name, maximum value, increment size, and last number
3. Write a script to insert two rows into the DEPT table. Name your script lab12_3.sql. Be sure to use the sequence that you created for the ID column. Add two departments named Education and Administration. Confirm your additions. Run the commands in your script.
4. Create a nonunique index on the foreign key column (DEPT_ID) in the EMP table.
5. Display the indexes and uniqueness that exist in the data dictionary for the EMP table.

1. Create SEQUENCE DEPT_ID_SEQ
START WITH 200
INCREMENT BY 10
MAX VALUE 1000;
2. SELECT Sequence_name, max_value, increment_by,
last_number

FROM USER_sequences
where Sequence_name = 'DEPT_ID_SEQ';
3. INSERT INTO dept (dept_id, dept_name)
Values (DEPT_ID_SEQ.NEXTVAL, "Education");

INSERT INTO dept (dept_id, dept_name)
Values (DEPT_ID_SEQ.NEXTVAL, "Administration");

4. Create INDEX emp_dept_id_idx ON emp (dept_id);
5. SELECT indexname, table_names, uniqueness
FROM user_indexes
WHERE table_name = 'EMP';
